The software does not depend on the audio quality, but is very accurate. And it's free. The name Shazam was inspired by Jay-Z's song called 99 Problems and is just as is. The name of its application icon in the computer is Shazam. The software uses a process called 'voice identification' to recognize songs. Its software uses a microphone to record and detect a voice so it can identify the song, as well as the artist singing it. Its goal is to recognize the song just by the voice alone. The software uses an algorithm that compares the voice (the words) to a database of music, called one or more fingerprints. As a result, it finds a match between the voice and the music and displays it. Shazam has been recognized by many users who have received recognition tests and it has been awarded for its accuracy, speed and easy-to-use functionality. Shazam Key Features: - Voice recognition, for song, artist and album recognition - Identify music from a voice recording - Display the results and the
